📇 Introduction

I am a **web developer** with a strong interest in technology and a track record of contributing to **open-source** projects. I have experience completing **personal projects** that demonstrate my ability to **work independently, problem-solve, and deliver quality results**. I am actively seeking **new opportunities** to expand my skills and grow as a professional in the technology industry. I mostly work with **Frontend**, but when needed, I can also work on the **backend** side of development.

🧠 Skills/Languages

- HTML
- React.js
- Next.js

- CSS
- TailwindCSS
- GitHub

- JavaScript
- React Redux
- Node.js

- Git
- TypeScript
- MongoDB

💼 Experience

Code Magic ⧉

Code Magic is an open-source application that simplifies and saves users time and effort during the project creation process by providing a user-friendly tool for creating projects with advanced CSS features.
- Utilized *HTML* and *CSS* to create the user interface and design of the application.
- Implemented *TypeScript* to generate complex CSS tricks for users, allowing for efficient project creation.
- Contributed to the open-source community by making Code Magic freely available for others to use and improve upon.

Threstagram

Threstagram is an open source tool that converts a thread's post to images, It lets you turn those threads into images with ease and allows you to give them your unique style by choosing themes, colours, and fonts.
- The user interface was built using **Next.js**, which ensures it looks great and works smoothly.
- **Tailwind CSS** is used to style, and keep everything looking nice and consistent.
- Using the **Threads-API** to access the posts and user profile
- It uses the **Context API** to manage and share information within the app
- **Typescript** is used to make sure the code is easy to work with and free from mistakes.

Whisper ⧉

Whisper is an open source web application that allows anonymous chat functionality while prioritizing user safety and privacy.
- The user interface was built using *React*, ensuring seamless and responsive interaction.
- Implemented *Tailwind* to ensure consistency in styling across the application.
- Managed and shared state across the application using the *Context API*.
- Data is stored and retrieved easily using MongoDB as the backend database.
- Handled all incoming and outgoing requests using *Node.js* and *Express.js*.
- Implemented *SocketIO* to provide real-time communication between users and to provide instant messaging.

HearitFresh ⧉

HearitFresh is a feature-rich, user-centric web application that allows users to create personalized Spotify playlists based on their unique music preferences.
- Created an interactive and seamless user experience using **React**, a JavaScript library for building user interfaces.
- Designed an application using **Tailwind**, a utility-first CSS framework, resulting in a visually appealing and user-friendly interface.
- Integrated **Spotify API** to enable seamless integration and personalized playlist generation.

🎓 Education

Bsc. Computer Science, Elizade University ⧉   *2019 – 2023*
